SUMMARY

Bachelor of Science in Information Technology student at North-West University with strong foundations in programming, database systems, and problem solving. Experienced in software development and data-driven systems using SQL, Java, C++, C#, and Python. Passionate about cybersecurity, artificial intelligence, and building secure and efficient technology solutions. Interested in applying analytical and technical skills within IT audit and risk environments.

WORK EXPERIENCE

Student Assistant

July 2025 - November 2025

- **School of Computer Science and Information Systems – North-West University**

Responsibilities:

- Assisted first-year students with programming concepts in C#, using ASP.NET
- Facilitated lab sessions and guided students through problem solving exercises
- Provided academic support during tutorials
- Assisted lecturers with marking and student feedback

MWR Virtual Assistant - Cybersecurity

March 2026 - June 2026

- Gained practical experience in web application and security testing using Burp Suite.
 - Applied concepts including XSS , DOM-Based XSS , CSRF , SQL injection, RCE .
 - File upload vulnerabilities, Encoding , Encryption and also hashing.
 - Performed vulnerability assessment activities and completed capstone security challenge focused on identifying and analysing web applications security flaws.
-

EDUCATION

North-West University

2023 - Present

- Bachelor of Science in Information Technology

Eketsang Secondary School

- Bachelor Pass - Science Stream
-

ACADEMIC PROJECTS

2017- 2021

Clinic Booking System (ASP.NET / Visual Studio)

- Developed a web-based clinic booking system to streamline appointment scheduling
- Implemented features for booking, viewing, and managing appointments
- Designed to reduce administrative workload and improve user experience

Restaurant Ordering System (C++)

- Built a command-line ordering system that allows customers to select menu items
- Implemented automated total calculation and receipt generation
- Improved transaction accuracy and order processing efficiency

Educational Privacy Awareness Game (Scratch)

- Collaborated in a team project to develop an educational game addressing privacy risks related to facial recognition
- Explored ethical considerations and safeguards for responsible technology use

CERTIFICATIONS

WeThinkCode 2025

GenAI Course for Software Engineers

- Gained practical understanding of Generative AI concepts, including large language models and prompt engineering
- Explored real-world use cases of GenAI in automation, content generation, and intelligent assistants.
- Learned how to structure effective prompts to improve model output quality and reliability.
- Implemented basic AI workflows within software development environments.
- Discussed ethical considerations, bias, and responsible AI usage in production systems.

Introduction to CISSP – Simplilearn

Learned the basic principles of cybersecurity including confidentiality, integrity, and availability of information. Gained an introduction to access control, authentication, and security practices used to protect systems and data.

Microsoft AI Fluency Course – Microsoft/ Geekulcha

Developed a basic understanding of artificial intelligence and how AI is used in modern technology and business environments. Explored responsible AI use and real-world applications such as automation and decision support.

Skills

- Computer literacy
- Communications Skills
- Programming
- Python
- Java
- C++
- C#

Database

- SQL
- Database systems
- Oracle

Concepts

- Data structures
- Object-oriented programming
- Software development principles
- Artificial Intelligence fundamentals
